Week 1 - Lab - Worksheet | Unit Launch · Systems Thinking - Compare, Map, and Stress-Test

Name: _____ **Class:** _____ **Date:** _____

Scenario: the same service-desk task, done by a single tool and by an integrated pipeline. Compare, map, and find the weak point.

1. Compare the single-tool output with the integrated-pipeline output for the same task. Log at least two differences.

_____

_____

_____

2. Map the integrated pipeline as boxes and arrows. Write the tool at each stage and label each hand-off.

1 · Input	→	2 · Tool	→	3 · Tool	→	4 · Output
	→		→		→	

3. Mark the hand-off most likely to fail, and describe one check you would add to catch an error there.

_____

_____

4. Write one conclusion: what does combining tools add, compared with a single tool?

_____

_____

5. My reflection: the hand-off I would check first in the pipeline I mapped, and why, is...

_____

_____

Week 2 - Core - Worksheet | AI Systems Understanding - Understanding the System

Strand Self-Check

- **Rate yourself against this week's success criteria: Can do / Partially / Not yet. What would you practise to move up a level?**

Can do ☐ Partially ☐ Not yet ☐ To practise:

_____

Name: _____ **Class:** _____ **Date:** _____

Scenario: the service-desk pipeline - transcribe, translate, check - and a look inside one AI component.

1. Order the pipeline. Write the component at each stage and the data format passed at each hand-off.

1 · Component	Format out →	2 · Component	Format out →	3 · Component
